Press release 1/2012

HIGH SPEED FULLY AUTOMATED SYSTEMS. PATENT APPLIED FOR THE HIGHEST FREQUENCY ELECTRO- MECHANICAL STANDARD PAD PRINTING MACHINE ON THE MARKET

*Exhibited at the Medtec 2012, Stuttgart, Germany,
Hall 4, Stand 4161 - TAMPOPRINT® AG*

The "Speed 40-2" allows target markets such as the electrical industry, beverage industry and others the labeling with the pad printing process and a production output which is unique in the market of pad printing machines. The negative performance gap between pad flat printing and pad rotary printing with respect to item throughput is significantly decreased. Its performance: up to 9,000 cycles per hour in continuous operation. Production volume using the automated system presented at the Medtec 2012 is 36,000 items per hour with 4-fold item jig. And a special configuration with 2 ink/doctoring cups allows 2 colors to be used in one run, i.e. 18,000 items/h printed blue and 18.000 items/h printed red. Highest printing accuracy, reproduction of even the finest contours, photo and line images is guaranteed.

Equipped with two ink/doctoring cups for image diameters of up to 38 mm and with a variable separation of 55-75 mm, the "Speed 40-2" short stroke pad printing machine offers flexible applications in automated systems. The energy costs are low in relation to the frequency (item throughput). No other pad printing machine on the market offers these advantages.

For technical details or a personal appointment please contact <mailto:messe@tampoprint.de>.

Our in-house exhibition offers you a live demonstration of our machine program at any time. You are cordially invited to our headquarters to see for yourself. We will be happy to take you through our exhibition with a WebEx video conference. Reserve your preferred date with us!
